PROFESSIONAL SUMMARY

Detail-oriented graduate student targeting Software Test Analyst roles, with hands-on experience in software testing, **test automation**, **test automation tool**, **test case design,** and quality assurance processes. Skilled in **automation**, functional testing, **query** handling, ETL validation, and defect tracking within enterprise applications. Strong understanding of **Computer Science**, **mathematic** principles, **Commercial Software**, **Public Service**, and continuous improvement practices.

EDUCATION

M.S. Cybersecurity, New York Institute of Technology, Vancouver (2024–2026)
B.Tech Electrical & Electronics Engineering, India (2017–2021)

TECHNICAL SKILLS

QA & Testing: Test Plans, Test Cases, Functional Testing, ETL Testing, Defect Tracking, Testing Processes, System Requirements, Continuous Improvement.

Tools: Jira, Informatica IICS, Wireshark, Nmap, Burp Suite, Linux, PowerShell.

Programming/Scripting: Python, SQL, Java, C#.

Concepts: Software Engineering, Web Applications, Data Validation, Data Pipeline, Data Quality, Agile Methodology.

EXPERIENCE

Data Engineering Associate – Accenture

- Assisted in developing **test plans** and executing test cases for enterprise data applications.
- Performed QA testing and **ETL validation** to ensure data accuracy and system reliability.
- Recorded, tracked, and documented QA defects during System Integration Testing (SIT).
- Worked with system requirements and **business rules** to validate data processing logic.
- Contributed to continuous improvement of data quality and testing processes.
- Prepared test documentation including source-to-target mapping and validation reports.
- Collaborated with cross-functional teams to resolve defects and improve system performance, while fostering **accessibility** mindset.
- Improved validation accuracy by 20% through enhanced test coverage.

PROJECTS

Drupal Vulnerability Testing (Web Application Testing)

- Tested web application behavior in a controlled environment and documented HTTP responses, ensuring **system engineering** best practices.
- Identified vulnerabilities and recorded findings similar to **defect reporting** practices
- Implemented monitoring rules to support system security and validation

Threat Hunting & Log Analysis (Python)

- Analyzed datasets and web application logs to identify anomalies and patterns
- Applied data validation and parsing techniques to detect suspicious activity
- Supported system analysis and testing of data-driven processes

ADDITIONAL

Coursework: Software Testing, Systems Analysis, Software Design, Network Security.

Skills: Communication, Team Collaboration, Planning, Problem Solving.

Certifications: Comptia Security+ , Eligible to work in Canada.
